

MIRA — Financial Crime Risk Assessment

Key Benefits

One platform to run, govern, and evidence the bank's enterprise-wide ML/TF risk assessment — replacing fragile spreadsheets with a configurable, auditable, board-ready solution.

1. A defensible, regulator-aligned methodology

Implements the full assessment chain — Inherent Risk → Control Assessment → Residual Risk — with transparent, traceable scoring at every level. Each rating is reproducible from its inputs (response → risk score → weighted score → aggregate), so every number on a board pack or regulatory submission can be explained and defended.

2. Fully configurable — no code, no vendor dependency

Risk factors, sub-factors, questionnaires, weightages, rating bands, the residual-risk matrix, and the scoring scale (3/4/5-point) are all editable in the tool. The bank's own methodology — and any future regulatory change — is accommodated without a development cycle.

3. End-to-end coverage across the enterprise

Assesses Customer, Product & Services, Geography, Channel, and Qualitative risk, plus a dedicated Product Risk Assessment and Control Framework Assessment — across business segments, sub-units, geographies, and risk types (ML/TF today; extensible to Sanctions and Proliferation Financing).

4. Multi-level assessment with roll-up

A hierarchical Stage → Risk Type → Geography → Business Segment → Sub-Unit structure with completion tracking, rolling results up from segment to entity and group level — with a consolidated register at the top and separate registers at each level.

5. Built-in governance & workflow

Supports the three-lines-of-defence operating model: task allocation to reviewers/approvers with due dates and reminders, role-based permissions (View / Add / Edit), and a complete audit trail of every action. Accountability and oversight are built into the process, not bolted on.

6. Board- and regulator-ready MIS and reporting

Advanced dashboards — residual-risk heat maps, inherent-risk distribution charts, and control-assessment analytics — plus one-click generation of a formatted report (Excel

and PDF) and year-over-year comparison. BARCC/board reporting that took weeks is produced on demand.

7. Speed and efficiency

Standardised data templates for collection, live recalculation as inputs change, and automated roll-ups compress the assessment cycle from weeks to days and free the compliance team from manual spreadsheet work.

8. Data integrity by design

A single calculation engine as the one source of truth eliminates the broken-formula, version-mismatch, and key-person risk of spreadsheets. Weight-validation checks, undo/redo, autosave, and versioned snapshots protect the assessment and its history.

9. Lightweight and low-cost to deploy

Runs on minimal infrastructure with no heavy platform overhead and no per-seat lock-in — fast to stand up, easy to tailor to the bank, and simple to maintain.

Why it beats the spreadsheet status quo

	Spreadsheet-based EWRA	MIRA
Consistency	Formulas drift, break, differ by file	One engine, identical logic every t
Auditability	Manual, hard to trace	Full audit log + traceable scoring
MIS / reporting	Rebuilt by hand each cycle	Dashboards + one-click report
Workflow	Email + trackers	Task allocation, reminders, appro
Governance	Uncontrolled access	Roles & permissions
Change management	Re-engineer the workbook	Configure in minutes

Value by stakeholder

- MLRO / Compliance team — faster cycles, less manual effort, a defensible methodology, and instant MIS.

- Board / BARCC — clear oversight, on-demand reporting, and a documented audit trail.
- Regulator — a transparent, traceable, methodology-aligned assessment.
- Technology — a lightweight footprint with no heavy infrastructure or licensing burden.
